# X-BOLT 140 10

* Non-binding image

DESCRIPTION / GEOMETRY

If you think of a reliable company, a technologically advanced machine and an autonomy that allows you to reach all your goals, this is your bike.

An advanced intermediate module carbon frame with internal battery, an efficient suspension design and the potential of the fourth generation Bosch drive system make this bike a benchmark in the ebike segment. The potential of its 140 mm of travel, the 29" wheels, together with the agility and lightness provided by its innovative chassis will allow you to literally glide over any terrain.

If you're thinking about the balance between comfort and performance of a **G2** geometry, if you're thinking of a fun, stable bike with a touch of "spice"... you're thinking of the new **X-BOLT 140**.
